

Table of Contents

Glossary of Terms.....	9
List of Abbreviations.....	11
Useful information.....	13
Introduction.....	15
What this book is about.....	15
How to use this boo	15
Accompanying feed budgeting spreadsheet.....	16
About the author Roger Martyn.....	16
Chapter 1 Pasture Feed budgeting. What is it and why do we do it?.....	17
1.1 What is in this chapter?.....	18
1.2 What is Pasture Feed Budgeting? -introductory notes.....	19
The different levels of feed budgeting.....	20
Matching pasture area to grazing animal numbers.....	21
Paddock Records.....	21
Forecast feed budgeting.....	21
1.3 Why should we pasture feed budget?.....	22
1.4 Key points to take from this chapter.....	23
Chapter 2 Photosynthesis – the source of all biological life.....	25
2.1 What is in this chapter?.....	26
2.2 Photosynthesis and energy capture.....	26
2.3 Photosynthesis and organic compounds.....	27
2.4 Chloroplasts – where photosynthesis takes place.....	30
2.5 The role of ATP and ADP.....	31
The role of phosphorus.....	33
2.6 C ₃ and C ₄ photosynthetic pathways.....	33
2.7 C ₃ and C ₄ plants and climate change.....	36
2.8 What is it about the chemical bonds of carbon that are so special?.....	37
Other roles of carbon to contemplate and appreciate.....	38
2.9 Photosynthesis and carbon sequestration.....	39
2.10 Soil organic matter (OM) and carbon sequestration.....	40
2.11 Photosynthesis and Energy Flow.....	41
2.12 Photosynthesis and the role of farmers.....	44
2.13 Key points to take from this chapter.....	44
Chapter 3 How pastures grow.....	47
3.1 What is in the chapter?.....	48
3.2 How grasses grow.....	48
Parts of the grass plant.....	49
Growth phases of grasses.....	51
Understanding the relationships of growth rates, plant sugar reserves, root growth and feed quality in grasses.....	52
Temperature and reproductive hormonal effects on grass growth.....	54
3.3 How clover grows.....	54
White Clover.....	55
Red Clover.....	57
3.4 What constitutes an 'ideal' pasture?.....	57
An ideal pasture should not be too long.....	58
Pasture growth aspects.....	58
Grazing animal nutritional aspects of pasture if grazed when too long.....	58
An ideal pasture should not be allowed to be grazed too short.....	60
Pasture growth aspects.....	60
Treading and Pugging considerations.....	61
Nutritional consequences to grazing animals when pastures are grazed too short.....	63
An ideal pasture should include a variety of pasture species.....	64

3.5 Key points to take from this chapter.....	68
Chapter 4 (Pasture) Dry Matter – What is it, how do we use it?.....	69
4.1 What is in this chapter?.....	70
4.2 Introducing the concept of Dry Matter.....	70
Why Dry Matter?.....	70
Justification for using kgDM as the default unit for feed budgeting.....	70
4.3 Dry Matter percentages of pasture.....	74
Pasture Dry Matter per Hectare.....	75
Total, available and residual pasture DM- important distinctions.....	75
4.4 DM content of other feed-stuffs.....	76
Using DM for determining animal feeding requirements.....	76
Using DM values to calculate wet weight amounts.....	78
4.5 Worked examples using DM.....	78
4.6 DM vs ME ,CP, NDF, SS, SSS for pasture feed budgeting.....	80
ME and its place in pasture feed-budgeting.....	80
CP, NDF, SS%, SSS%, Fat% and their place in pasture feed-budgeting.....	81
4.7 Key points to take from this chapter.....	85
Chapter 5 Animal Nutrition.....	87
5.1 What is in this chapter?.....	88
5.2 Nutrition of grazing animals.....	88
What is a nutrient and what is nutrition?.....	88
5.3 Proteins.....	89
Structural roles of proteins.....	89
Functional roles of proteins.....	89
Regulation roles of proteins.....	90
5.4 Proteins and the grazing animal.....	90
Protein and nitrogen.....	90
5.5 Vitamins.....	91
Roles of vitamins.....	92
5.6 Carbohydrates.....	94
5.7 Lipids (Fats and oils).....	94
5.8 Minerals.....	95
Macro-elements.....	95
Micro-elements.....	95
5.9 Water.....	96
5.10 An explanation of terms often used in a feed analysis.....	98
Dry matter (DM%).....	98
Digestibility %.....	98
Metabolisable Energy (ME).....	100
Total Digestible Nutrients - TDN.....	100
Neutral Detergent Fibre - NDF.....	101
Acid Detergent Fibre -ADF.....	102
Crude protein.....	102
Defining Crude Protein by what it is required for.....	102
Defining Crude Protein by its chemical make-up.....	104
Is CP% even a meaningful measurement?.....	105
Soluble Starches and Sugars (SSS).....	106
Starch.....	106
Fats and Oils.....	107
5.11 Key points to take from this chapter.....	108
Chapter 6 The Digestive System of Ruminants and other Grazing Animals.....	111
6.1 What is in this chapter?.....	112
6.2 Introduction.....	112
6.3 By Ruminant digestion.....	112
6.4 Pseudo-ruminant digestion.....	115
6.5 Key points to take from this chapter.....	116

Chapter 7 Pasture DM Feed Requirements of Grazing Animals.....	119
7.1 What is in this chapter?.....	120
7.2 An explanation of DM feed requirements for grazing animals.....	120
7.3A worked example for calculating the pasture DMI requirements of a lactating Friesian dairy cow.....	122
7.4Useful DM feed data for pasture fed lactating dairy cows.....	122
Useful 'rules of thumb' for dairy cattle responses to pasture feed DM intakes.....	123
Snapshot of a New Zealand dairy cows production and kgDM/day intake requirement.....	124
7.5Key points to take from this chapter.....	124
Chapter 8 Pasture Area: Simple ways to calculate it for any situation.....	127
8.1 What is in this chapter?.....	128
8.2 Why we need to calculate pasture area in feed budgeting.....	128
A note on metric versus imperial units.....	128
8.3Area calculation methods.....	130
Calculating square or rectangular shaped areas.....	130
Calculating the area of complex shapes.....	131
Even more difficult shaped areas.....	133
Calculating the area of circles.....	134
8.4Using aerial photographs for working out areas.....	136
How to find the scale of an aerial photo when none is supplied.....	138
How to find the area of a slope using aerial maps.....	140
Google Maps, Google Earth and proprietary software examples.....	141
8.5Key points to take from this chapter.....	142
Chapter 9 Pasture Growth Rates- how to calculate and record.....	145
9.1 What is in this chapter?.....	146
9.2 Pasture Growth Rates.....	146
Difference between Pasture Growth Rates and Average Pasture Growth Rates.....	146
9.3What do we use Pasture Growth Rates for?.....	146
9.4 Factors that influence Pasture Growth Rates.....	147
9.5Where do we find pasture growth rate data?.....	149
9.6 Determining your own pasture growth rates.....	149
9.7Key points to take from this chapter.....	151
Chapter 10 Pasture Allocation: The how to's.....	153
10.1What is in this Chapter.....	154
10.2Short term and long term (forecast) pasture feed budgeting – what's the difference?.....	154
10.3Feed allocation scenarios.....	155
Feed allocation worked example: Scenario 1: Calculating how many stock a pasture break can feed..	155
Feed allocation Worked Example Scenario 2: Calculating if there is sufficient feed within a pasture break.....	158
Worked example Scenario 3: Calculating the number of breaks per paddock	159
10.4 Key points to take from this chapter.....	161
Chapter 11 Pasture Feed Wedges.....	163
11.1What is in this chapter.....	164
11.2Limitations of a Pasture Feed Wedge.....	164
Using a pasture wedge to predict pasture quality and therefore which pasture should be grazed next	167
Using a pasture wedge to predict pasture surpluses and deficits.....	168
Using a pasture feed wedges to predict pasture rotation lengths.....	169
11.3Key points to take from this chapter.....	170
Chapter 12 What is an 'Average Farm Cover'.....	171
12.1 What is in this chapter?.....	172
What is an 'average farm cover'?.....	172
How to calculate the 'average farm cover'.....	172
12.2 What use is average farm cover information?.....	173
12.3What should my average farm cover values be?.....	174
Some possible explanations for average farm cover variations throughout the year.....	176
Using Average Farm Covers as bench mark indicators for feed and pasture management.....	177

12.4 Key points to take from this chapter.....	182
Chapter 13 Calculating Grazing Rotation Lengths.....	183
13.1 What is in this chapter?.....	184
13.2 Defining what is meant by a grazing rotation.....	184
13.3 How to determine a grazing rotation length.....	184
Transitioning to faster rounds.....	187
Possible consequences of not getting out and 'calculating the break'.....	188
13.4 Examination of the '120 day grazing round leading into winter' recommendation.....	188
13.5 Key points to take from this chapter.....	191
Chapter 14 The 'two and a half leaf' approach to pasture assessment, management and feed budgeting.....	193
14.1 What is in this chapter.....	194
14.2 About the Two and half Leaf System.....	194
14.3 Two and half Leaf System fundamentals.....	195
How is the Two and half Leaf System approach different to other forms of pasture feed -budgeting? ...	197
14.4 Pro's and con's of the the Two and half Leaf System- LER approach.....	198
Pro's.....	198
Con's.....	199
14.5 Key points to take from this chapter.....	199
Chapter 15 Pasture Surpluses and Deficits. How to identify and deal with them.....	201
15.1 What is in this chapter.....	202
15.2 Pasture surpluses and deficits will invariably occur How can we readily identify them and what can we do about them?.....	202
Ways to identify looming pasture surpluses and deficits.....	202
Ways to deal with looming pasture surpluses or deficits.....	203
15.3 Key points to take from this chapter.....	204
Chapter 16 Accounting for feed wastage in pasture budgeting.....	207
16.1 What's in this chapter?.....	208
16.2 What is pasture wastage?.....	208
16.3 Methods for accounting of pasture wastage.....	208
Pasture wastage due to trampling/fouling from dung and urine.....	208
Wastage due to leaf death – because of hot and dry conditions, drought etc.....	210
Discussion about pasture wastage due to trampling, spoilage.....	211
16.4 Losses of DM (wastage) when making pasture supplements such as hay and silage.....	213
16.5 Key points to take from this chapter.....	214
Chapter 17 Forecast Feed Budgeting for Pastures.....	217
17.1 What is in this chapter.....	218
17.2 A quick review of the basis for forecast pasture feed budgeting.....	219
17.3 What is pasture forecast feed budgeting?.....	220
17.4 Identifying the information required for forecast pasture feed budgeting.....	224
Information required for forecast pasture feed budgeting.....	224
Choosing the length of time a feed budget forecasts for.....	225
Choosing the time increment for a feed budget.....	225
17.5 How to use the information pasture forecast feed-budgeting delivers.....	226
17.6 Key points to take from this chapter.....	228
Chapter 18 Pasture Measurement.....	231
18.1 What is in this chapter.....	232
18.2 Why do we measure pasture.....	232
18.3 What is it we actually 'measure' when measuring pasture?.....	232
18.4 Ways to measure pasture - methods and tools.....	232
Cut, Weigh and Dry (CWD).....	233
Limitations of CWD.....	233
Direct measurement of pasture with tools for kgDM/ha estimate purposes.....	235
Pasture Ruler (Pasture Stick, Grazing Stick).....	235
Rising Plate Meter - Introduction.....	236
Rising Plate Meter description.....	236

18.5 Capacitance Probe Pasture Meter (CPM) - an introduction.....	240
How the Capacitance Probe system works.....	240
18.6 Light beam measurement systems.....	246
18.7 Sonar (sound) measurement systems.....	248
18.8 Visual Assessment.....	249
18.9 Pastures In Space – satellite imagery.....	250
Limitations of satellite imagery.....	252
18.10 Pasture Mass Measurement Tool Comparison.....	254
18.11 Key points to take from this chapter.....	255
Chapter 19 Record keeping. What to record and when.....	257
19.1 What is in this Chapter.....	258
19.2 Reasons for keeping pasture measurement records.....	258
19.3 Paddock records format.....	259
19.4 Average Daily Pasture Growth Rates records.....	260
19.5 Average Farm Cover.....	261
19.6 Frequency of pasture measurements required for good pasture measurement records.....	262
19.7 Key points to take from this chapter.....	263
Chapter 20 Stocking rate – how to determine and use.....	265
20.1 What is in this chapter.....	266
20.2 Why stocking rates/stock units/carrying capacity?.....	266
Stocking Rate, Carrying Capacity, Stock Density. Same thing or different?.....	266
Stocking Rate:.....	266
Stocking Density:.....	266
Carrying Capacity.....	267
20.3 Class of stock.....	267
Stock units-(SU).....	267
20.4 How to determine Stocking Rates.....	269
20.5 Determining the Forage Available.....	269
20.6 Determining the demand for Forage (pasture feed).....	270
Is energy accounting the way to go in pasture feed budgeting?.....	273
Matching Stocking rates to seasonal variations in forage demand.....	273
20.7 Key points to take from this chapter.....	275
Chapter 21 Planned (Holistic) Grazing-What is it?.....	277
21.1 What is in this chapter.....	278
21.2 What is Holistic Planned Grazing?.....	278
21.3 Planned Grazing - the main points.....	278
21.4 Comparison of Planned Grazing with Set Stocking.....	288
21.5 Applying Planned Grazing principles to conventional temperate - pasture management.....	289
21.6 Defining the 'planned' part of Planned Grazing.....	290
21.7 Key Points to take from this chapter.....	290
Appendix 1 - Average daily pasture growth rates - New Zealand- source Beef & Lamb New Zealand.....	294
Appendix 2 - Average daily pasture growth rates - New Zealand- source NZ Dairy.....	295
Appendix 3 - Average daily pasture growth rates Australia - Source PROGRAZE®.....	299
Appendix 4 - Tasmanian monthly growth rates DAIRY.....	312
Appendix 5 - Feed-stuff values – DM%, ME, CP, NDF, SSS, Starch, Fat.....	314
Appendix 6 - feed-stuffs - DM% and ME only.....	316
Appendix 7 - Estimated Yields of Forage Crops.....	319
Appendix 8 - Wet & dry weights for common dimension forms of Hay and Silage.....	320
Appendix 9 - Wastage estimates of some commonly fed supplements.....	321
Appendix 10 - A Cut Weigh and Dry (CWD) protocol for estimation of pasture dry matter per hectare (kgDM/ha.....	323

Appendix 11 - Pasture Covers photo gallery.....	326
Appendix 12 - Total daily dry matter requirements lactating cows (kgDM/cow/day).....	336
Appendix 13 - Annual pasture Dry Matter requirements for lactating Dairy cows.....	337
Appendix 14 - Daily energy requirements of lactating dairy cows for different activities.....	338
Appendix 15 - Feed requirements for a Dry dairy cow - maintenance & pregnancy demand.....	341
Appendix 16 - Dairy Young Stock Feeding Requirements.....	342
Appendix 17 - Daily nutrient requirements of large breed cows.....	344
Appendix 18 - Metabolisable energy requirements (MJ/day) of cattle for maintenance and growth.....	345
Appendix 19 - kgDM requirements for the maintenance and live-weight gain of mature ewes.....	347
Appendix 20 - Feeding Requirements for Deer.....	349
Appendix 21 - New Zealand Stock Unit System.....	352
Appendix 22 - The Australian Stock Unit System.....	354
Appendix 23 - Further reading and feed-budgeting resources.....	359
